

David Oluwatimilehin "Timi" Folayan

(615) 779-0421 | folayaod@rose-hulman.edu | linkedin.com/in/timifolayan

EDUCATION

Rose-Hulman Institute of Technology

Terre Haute, IN

Bachelor of Science in Software Engineering; Minor in Geography

Expected 2027

- Relevant Coursework: Object-Oriented Development, Operating Systems, Web Development, Data Structures & Algorithms, Digital Systems, Databases, Formal Methods, Practical Security

TECHNICAL SKILLS

Languages & Technologies: Java, Python, SQL, C#, JavaScript, HTML/CSS, C, C++, React, R, Matlab

Tools & Platforms: Git, VS Code, Eclipse IDE, IntelliJ, Docker, Kubernetes, FastAPI, PostgreSQL, MLflow, scikit-learn, Firebase, Unit Testing, Microsoft SQL Server

EXPERIENCE

Emerson-NI (National Instruments)

Austin, TX

Sales Development Engineering Intern

Summer 2026

- Tasked with supporting the sales engineering team through developing opportunity pipeline from inbound sales demand and proposing tailored hardware and software solutions with prospective customers, generating over \$2,600,000+ in opportunity dollars individually
- Built technical proficiency across NI's measurement and automation portfolio while developing consultative selling and customer-facing communication skills. Led live demonstrations of the MioDAQ platform at a company-wide Tech Expo, translating complex technical concepts into customer value, helping to drive new business and relationships
- Created and documented multiple internal projects showcasing NI's hardware/software capabilities, supporting community outreach initiatives and increasing NI's visibility
- Utilized LinkedIn Sales Navigator to build account intelligence, uncover prospecting opportunities, and strengthen customer engagement strategies, supporting sales engineers in identifying and qualifying potential opportunities

RHV - Gas Valve Calibration System

Terre Haute, IN

Software Engineer Intern

Summer 2025

- As the sole software engineer on a multidisciplinary team of electrical, computer, and mechanical engineers, built a multithreaded WinForms application in C# to serve as the central control interface for a six-unit calibration system
- Implemented Modbus TCP/IP and serial communication to coordinate PLCs and programmable power supplies, synchronizing thermal, pressure, and flow testing in real time across all six units
- Enabled high-throughput calibration of over 1,000,000 gas valves with minimal operator intervention

Rose-Hulman

Terre Haute, IN

Teacher Assistant

Spring 2026

- Supported undergraduate students in mastering formal methods concepts, including logic, specifications, and program correctness
- Assisted with grading assignments and providing detailed feedback on formal proofs and model-based designs

Ask Rose

Terre Haute, IN

Learning Advisor

Winter 2024 - Present

- Assisted students from grades 6-12 with STEM homework problems, focusing on mathematics, physics, and computer science, resulting in a 99% student satisfaction rate
- Provided clear explanations and guided students through problem-solving techniques to develop a deeper understanding of core concepts, leading to a measurable improvement in students' skills, with 80% reporting increased confidence

PROJECTS

NBA Player Predictor | *Python, scikit-learn, FastAPI, PostgreSQL, MLflow, Docker, Kubernetes*

- Set out to predict a player's next-game point total against a specific opponent; trained a RandomForestRegressor on real player/team data from PostgreSQL using matchup-aware features (scoring averages, opponent points allowed) instead of opaque IDs
- Tracked 10 experiment runs in MLflow, varying tree depth and test split, and promoted the lowest-MAE model to the Model Registry under a production alias
- Deployed the model via containerized FastAPI with CI/CD through GitHub Actions to GKE, automating QA releases and gating production for reliability

Settlers of Catan | *Java, Maven, VS Code*

- Developed a Java implementation of Settlers of Catan using a multi-package Maven structure to organize game logic, board state, and player management
- Diagnosed and resolved cross-package compilation and classpath failures, including broken i18n resource bundle loading, and solely implemented a clean German-language locale from scratch

Lost and Found Database | *SQL, Java, Eclipse IDE, Microsoft SQL Server*

- Designed and built a database system for a lost and found application using Microsoft SQL Server, reducing item retrieval time by 40%
- Developed a Java-based interface with integrated SQL connectivity, applying OOP design principles to improve usability and long-term maintainability

LEADERSHIP & INVOLVEMENT

Vice President, African Student Union – 2024–Present

Public Relations Chair, National Society of Black Engineers – 2024–Present

Member, Linux Users Group & Computer Security Club – 2023–Present

Member, ColorStack – 2023–Present
